

Will the Town vote to add the following to Section 24.01 of Article XXIV of the Town By-laws:

DRIVEWAY PERMITS

1. All hereafter constructed driveways or other entrances for motor vehicles which connect private property with a public way shall require a written permit from the Highway Superintendent before construction. Such driveways shall be located so as not to interfere with existing or proposed drainage structures or systems.
2. Such driveways shall abut the travelled portion of the way at the same level and shall extend from the travelled portion of the way to the private property line with a three (3) inch minimum pitch above the road grade at intersection. The minimum radius at the edge of the travelled way shall be ten (10) feet.
3. Earth materials located between the travelled portion of the way and the private property line shall be removed and replaced with twelve (12) inches of gravel and three (3) inches of bituminous concrete placed in two layers for a distance to be determined by the Highway Superintendent after consideration of the topography and soil conditions in the area.
4. A drain pipe shall be placed under such driveway as specified by the Highway Superintendent if he deems it to be necessary to prevent a drainage problem in the public way.
5. Zoning Board approval is needed for the construction of any new driveway within 15' of a property line or of any existing driveway within 10' of a property line.
6. No such driveway shall be used and the Inspector of Buildings shall not issue a Certificate of Occupancy for a newly constructed altered building to be serviced thereby until the Highway Superintendent issues a Certificate indicating the proper completion of the driveway in accordance with the permit unless the Highway Superintendent issues a written extension of time for such completion. No such extension of time shall exceed six (6) months.
7. A permit must be obtained from the Board of Selectmen for any driveway construction or curb removal.
